

## **Plastic Recycling : Possiblistic**

**Zoé** : We want to create objects with recycled plastic. Our customers will be the parents, families, neighbors, visitors to our events, and the people who will be in the local markets we intend to participate to, such as a Christmas market.

**Yémo** : We have a lot of ideas of objects to create. For example : little floating boats, fishing material,

**Icaro** : and basket-ball basket

**Brieuc** : We have started collecting plastic in the spring.

**Icaro** : The plastic material will be provided by the local give-away shop, by our families, and by the waste disposal park.

**Yael** : Our recycled products will have a very light ecological footprint, and be items that are useful to people.

**Corentin** : And we will learn new skills in artcraft and business.

**Lucie** : Beginning of september, we meet Marie who has a little new business. Geotrupes Plasticus. She recycle plastic and make big compressed plastic to create a lot of things like clocks, shelves.

**Icaro** She has a new machine to make bowls. She teaches us to make them ! Here it is !

### **Vidéo Corentin**

First she collects little plastic caps. She grinds them in a machine. Then she washes the mixture in a cotton bag inside the washing machine.

Then we could try ! We close a mold with screws and put it under the machine. We pull the wheel and the plastic comes out liquid.

We put the mold in the water to cool it.

Then we can open it and have a nice plastic pot.

### **ICaro**

Our first project will be a basket ball basket. It will help us !
